

Ramadan 2011 - The 8th Day

The muminun are only those who have had iman in Allah and His Messenger and then have had no doubt and have done jihad with their wealth and themselves in the Way of Allah. They are the ones who are true to their word. (Surat al-Hujurat, 15)

Allah is very considerate of people -1-

Allah creates people in this world in an environment of trial. Headorned this environment of trial with unique details. We see that Allah continuously presents blessings to people from the details in this world, some of which we are aware and unaware. Thinking over these details is instrumental tounderstanding Allah's infinite wisdom.

Allah created tens of thousands of cities in this world and millions of houses accordingly in these cities. Each house, on the other hand, is in an aesthetical order. The harmony of colors in the carpet, the order of the armchairs, the image on the TV, and the beauty of the dresses

in the wardrobe are all among the details of which we can see. However, the details we see are not limited to these only. Every house also has microbes and bacteria that are invisible to the naked eye.

Allah is the One Who knows everything and Who determines and gives order to everything. Everything a person goes through from his birth to his death, what they feel while experiencing

these incidents and every vision they see come into existence because Allah creates them. For this reason a person must not live in heedlessness. He must ponder over the existence of Allah's infinite knowledge in details. Only then can details become meaningful. Such a person does not consider a wool dress only as a piece of cloth. Pondering over the DNA, which consists of all the features of the animal from which the wool was obtained, he gives gratitude to Allah for the artistry He creates in details.

In the Qur'an, Allah's superior power is related as thus:

Everything in the heavens and the earth glorifies Allah. He is the Almighty, the All-Wise. The kingdom of the heavens and the earth belongs to Him. He gives life and causes to die. He has power over all things. He is the First and the Last, the Outward and the Inward. He has knowledge of all things. It is He Who created the heavens and the earth in six days, then established Himself firmly on the Throne. He knows what goes into the earth and what comes out of it, what comes down from heaven and what goes up into it. He is with you wherever you are – Allah sees what you do. (Surat al-Hadid, 1-4)

One of the most beautiful manifestations of Almighty Allah: Flamingos

Flamingos which derive their names from the Latin name "flamma", meaning "flame", is one of the most beautiful examples of the artistry Allah displays with colours. This richness of colours in flamingo come into existence because of the existence of pigments stored during when the feather first starts to come into being or the light movements due to the feathers' structural properties. One of the most important features of these very colorful features is their being inanimate. Feathers are periodically replaced by new ones since these organisms which come into being from a substance called keratin wear out in a short while due to environmental conditions.

How do the Colours of Flamingos come into existence?

Due to the different structures of feathers flamingos may present an appearance just like a glass prisma separating light into colours. The colours emerging from refraction of light are more alive and metallic than those colored by pigments. The colours of these feathers change. Generally the colours of green, blue and metallic colours in birds come into existence as a result of light refraction. However some colours may also originate from pigments. These are melanin pigments responsible for the colours of black, brown or dull yellow; carotenoids, which exist in orange, tomato, carrot, various flowers, bacteria, fungi and algae, on the other hand, give the colours of red, yellow and orange. Each year sea moss produce a hundred million tons of carotenoids. Some

animals use carotenoids in coloring. The colours of especially some birds (in yellow and red feathers), fish (salmon) and many invertebrates may be blue, green or pink due to complex carotenoids made with proteins. The main origin of reddish pink colour of flamingos is carotenoids. The bright pink colour of flamingos originates from the food it eats. As they eat more of the food with carotenoid content, their feathers turn into a more bright and dark pink. With the unprecedented artistry of colour Almighty Allah, the Lord of all the realms, displays on flamingos, He introduces Himself to us and ensures the preservation of colours with the special systems He creates:

**"Have they not travelled about the earth and do they not have hearts to understand with or ears to hear with? It is not their eyes which are blind but the hearts in their breasts which are blind."
(Surat al-Hajj, 46)**

Ibn Jajar describes how Hazrat Mahdi (as) will have many virtues

In a commentary on this subject, Ibn Hajar says it is the grave corruption of the End Times that makes Hazrat Mahdi (as) virtuous. **"He will have many virtues because of the difficulties of the corruption in his time."**(Ibn Hajar, a.g.e., p. 71)

Allah's promise is a certain fact

The invalidity of the famous Darwinist claim that "useful mutations do exist."

The false idea that useful mutations exist is a classic Darwinist claim. Although the whole scientific world knows, with absolute scientific evidence, that mutations have a destructive or fatal effect, this claim is still persistently made, out of a fear of humiliation. Because Darwinism is a theory that depends totally on mutations. All Darwinists know that if the destructive effect were to be mentioned just once, that would spell the end of Darwinism. It is for that reason they try to give the impression, citing invalid and utterly pitiful examples, that mutations can be beneficial. But this is a complete deception.

- As we have set out many times before, mutations have a net harmful effect, with only 1% being neutral, though the latest scientific research has shown that even these can produce long-term damage in the organism.[\[1\]](#) The net harmful effect of mutations is not a psychological defense mechanism, but an explicit truth revealed by science.
- If Darwinists object to this, then they are directly flying in the face of science. Because this is not a matter of opinion, but an absolute scientific fact.
- It is impossible for mutations to bestow any useful characteristic. Under normal conditions, everything in a living body exhibits complete regularity, order and symmetry. In addition, these systems co-exist with the most delicate balances and exhibit a glorious complexity right down to the finest detail. Mutations are random interventions, such as with radiation, and mean breakages, impairments and dislocations. They INEVITABLY DAMAGE these extraordinarily complex systems, with their regularity, symmetry and order. It is illogical and a violation of science to maintain anything else.
- The results at Chernobyl, Nagasaki and Hiroshima were all the results of mutations. Under the effect of mutations, organisms with regular structures either died or suffered severe damage, and this harmful effect even manifested itself in subsequent generations.
- Darwinists generally cite various examples of immunity in order to try to corroborate their claims that "beneficial mutations do exist." But these examples all consist of a variation or impairment in bacteria or immune cells.
- Sometimes, a dislocation in a single DNA nucleotide, or base, can bestow immunity to an antibiotic on a micro-organism. But although this may be useful to the micro-organism, IT IS NOT A BENEFICIAL MUTATION. Because the mutation in question has actually harmed the micro-organism. The ribosome sequence belonging to the micro-organism has been impaired, and it prevents the antibiotic binding to the organism by damaging the lock and key harmony. In other words, rather than there being any novelty in the micro-organism, we are looking at a loss of information.
- Mutations are literally like firing at a regular structure with a machine gun. Opening fire on a healthy structure will entirely do away with that structure. The fact that one bullet has no effect or destroys an existing infection in the body changes nothing. The organism will already have been killed by the other 99 bullets hitting it.
- The example that Darwinists cite with such examples is like a bullet healing the body by destroying a single infection. The organism is devastated by mutations, but Darwinists concentrate on the one that heals this infection.
- Since the subject of mutations constitutes one of the most damaging points for Darwinists they engage in demagoguery by depicting minor instances of variation or the effects examined above as major evidence. The fact is, however, that the adherents of evolution,

who maintain that all living things acquired their present symmetrical and complex structures by way of evolution, have to be able to cite examples of mutations that take place one after the other and are all beneficial, and that also bestow new information on the organism.

- What is more, Darwinists also have to provide evidence for the scenario of one living thing's physiology turning into that of another life form through mutation at the macro level. BUT THEY CANNOT EVEN CONTEMPLATE PRODUCING SUCH EVIDENCE. Because as they know full well, mutations destroy and ruin and occasionally entirely destroy the organism concerned.
- It addition, we need to make the following point very clear: mutations can never bestow any new data on an organism that is not already in its genome. That is impossible. The examples alleged to have "added new information" are all misleading. No new genetic information is ever added. All that happens is that information already existing in a living thing's genes starts to be used by becoming more visible as a result of variations.
- Breaks and dislocations in the bases that make up DNA CAN NEVER PRODUCE NEW INFORMATION. They do not equate to information that did not already exist being bestowed on a living thing. Darwinists are without doubt well aware of this. But they insist on depicting dislocations in genetic bases as new data. This is an example of Darwinist demagoguery.

OAK LEAF

Age: 45 million years old
Location: Green River Formation,
Wyoming
Size: 30 millimeters (1.18 in) height;
matrix: 60 millimeters (2.3 in) by 60
millimeters (2.3 in), 15 millimeters
(0.59 in) thick
Period: Eocene

Fossil records reveal that plants never underwent any evolutionary process and have no imaginary ancestors. Fish have always remained fish, birds have always remained birds, spiders have always remained as spiders, pines and spruces have always remained pines and spruces, and roses have always remained roses. And just like all these living beings, oaks have always remained as oaks, as the oak leaf fossil pictured confirms.

[In The Name Of Allah, The All-Merciful And Most Merciful](#)

The Qur'an's 113 surahs begin with the name of Allah, The All-Merciful and Most Merciful. Believers are constantly aware of this name's manifestations, because it encompasses the universe and embraces each believer from birth to death, in sickness and health, weakness and strength, as well as permeates the matchless beauty of all animate and inanimate beings. The divine mercy, compassion, love, help, protection, grace and forgiveness of Allah toward all humans is one of the most beautiful manifestations of our Lord. The manifestations of this name deepens the way in which believers view the universe and all living things and adhere to the Qur'an's moral code. For this reason, when Muslims begin to read the Qur'an, practice the morality Qur'an tells and communicate it to others, advise other believers, and think about why the universe was created, they should breathe the most beautiful names of Allah in their spirits. To comprehend the beauty, contentment, well-being and blessing in these peerless names of our Creator, and to be aware of their sovereignty in Islam, is an important step toward deepening one's faith and coming to know Allah through His most beautiful names.
