The vision system that we have is immeasurably superior to the display technologies designed by experts in several techniques. This system has a characteristic which the advanced technology cannot imitate; even if we turn our head very fast, the clarity and the quality doesn't change. Also under normal circumstances, every time we move our head, we would have seen images sliding or unable to focus on a certain point, just like the images taken with an amateur camera. But we never come across such an

image because no matter which direction we turn our head to, our eyes automatically move to the opposite direction to balance the vision. If we had to turn our eyes every time when we move our head to look at the same point, it would have been very difficult and there would be much disorder. But this never happens, and the visual process can be completed perfectly; thanks to the flawless details in this automatic tuning system. Allah's (swt) endless Wisdom is revealed in a verse from the Quran that states:

"And whatever of blessings and good things you have, it is from Allah. Then, when harm touches you, unto Him you cry aloud for help."
(An-Nahl 16:53)

The scientific name of this reflex which coordinates our vision like an automatic camera system is the Vestibulo-ocular reflex. But this reflex doesn't do its duty only with our eyes. Our eyes have a very important and secret supporter to run this reflex: Our ears; **the perfect system of the ear that controls the head's turning movements**

This system has a characteristic which the advanced technology cannot imitate; even if we turn our head very fast, the clarity and the quality doesn't change.

The structures named "the semi-circular canals" in our ears are miracles of creation with the duty they carry out. There are 3-three semi-circular canals and they are combined with each other perpendicularly. Each of these three canals is created specially by Almighty Allah (swt) for the 3-three types of turning movements that we do with our head. On the tips of these canals, there is a part called the "ampulla" which contains ciliated cells.

As one of the countless signs of the Superior Wisdom of Almighty Allah (swt), these little ciliated cells

Bir çekimin **amatör** bir **kameraman** tarafından yapıldığını açığa çıkaran en önemli nokta, **görüntüde** oluşan **titreme** ve bulanıklıklardır. Bu kalitesiz görüntülerin nedeni ise **odaklanılan** noktanın aniden **değişmesi** ile birlikte **görüntünün** kaymasıdır. Oysa bir insan koştuğunda, aniden başını yukarı kaldırdığında ya da yana çevirdiğinde gördüğü **görüntü net** ve **kalitelidir**, asla **kaymaz** ve **bulanıklaşmaz**. Peki, gözlerimiz böylesi **net** ve **kaliteli** görüntüleri olumsuz şartlara rağmen nasıl **elde eder**?
